

Yash — Developer Portfolio & GitHub Pages Deployment

Student Developer • Java • Web • Android • AI

A Complete Step-by-Step Technical Guide for Project Setup, Development, Git Version Control, and Live Hosting

ASSIGNMENT OBJECTIVES & DELIVERABLES

- ✓ **Step 1:** Project Setup & Directory Architecture (portfolio folder)
- ✓ **Step 2:** Modern Website Development (HTML5, CSS3, ES6 JavaScript)
- ✓ **Step 3:** Adding Portfolio Sections & Features (About, Skills, 5 Projects, Education, Contact)
- ✓ **Step 4:** Creating and Setting Up GitHub Repository (`portfolio`)
- ✓ **Step 5:** Pushing the Project to GitHub (`git init` , `add` , `commit` , `remote` , `push`)
- ✓ **Step 6:** Deploying the Website using GitHub Pages (main branch, root folder)
- ✓ **Step 7:** Adding the Final Live Website Link & Submission Verification

TABLE OF CONTENTS

1. Project Setup & Workspace Initialization	Section 01
2. Frontend Architecture & Website Development	Section 02
3. Adding Portfolio Sections & Features	Section 03
4. Creating & Setting Up the GitHub Repository	Section 04
5. Pushing the Project to GitHub (17 Step Workflow)	Section 05
6. Deploying the Website with GitHub Pages	Section 06
7. Final Live Website Link, Verification & Submission Form	Section 07
Appendix: Troubleshooting Common Pitfalls & FAQ	Appendix

01 Project Setup & Workspace Initialization

The portfolio project is organized into a modular, clean folder structure that works directly in the browser and connects smoothly with GitHub Pages without requiring complex build steps or dependencies.

A Directory Hierarchy

The project structure inside the `portfolio` folder:

```
portfolio/
├── index.html           # Root HTML5 entrypoint
├── style.css            # CSS3 styles (Dark/Light mode, animations)
├── script.js           # Interactivity, typing effect, nav tracking
├── README.md           # Documentation & project overview
├── Yash_Portfolio_GitHub_Pages_Step_by_Step.pdf # Step-by-Step Assignment PDF Guide
└── docs/
    └── guide.html      # Source documentation for PDF generation
```

B Local Setup Steps

- Create Folder:** Create a folder named `portfolio` on your machine.
- Add Core Files:** Add `index.html`, `style.css`, and `script.js` into the folder.
- Open in VS Code:** Launch Visual Studio Code and open the `portfolio` folder.
- Test Locally:** Right-click `index.html` and choose *"Open with Live Server"* or double-click to view in Google Chrome / Microsoft Edge.

02 Website Development: Structure & Styling

The website is built with semantic HTML5 for structure and modern CSS3 for design and theming.

A Semantic Architecture

Clean semantic sections ensure accessibility, structured hierarchy, and SEO performance:

- `<header>` : Fixed navigation bar with logo branding, nav links, and Dark/Light toggle.
- `<section id="hero">` : Headline, dynamic subtitle, developer terminal card, and CTAs.
- `<section id="about">` : Full biography, Career Objective, and 4 Quick Overview cards.
- `<section id="skills">` : Categorized technical skills (Java, Web, Android, AI/CV, Tools).
- `<section id="projects">` : Showcase of 5 featured projects with descriptions and tags.
- `<section id="education">` : MCA degree details and Currently Learning skills.
- `<section id="contact">` : Social channels and interactive contact form.

B CSS3 Design System & Theming

CSS custom properties enable instant transitions between dark and light themes:

```
:root {
  --bg-primary: #0a0f1d;
  --bg-card: rgba(17, 24, 39, 0.85);
  --text-primary: #f9fafb;
  --accent-primary: #6366f1; /* Indigo */
  --accent-gradient: linear-gradient(135deg, #6366f1 0%, #38bdf8 100%);
}

[data-theme="light"] {
  --bg-primary: #f8fafc;
  --bg-card: rgba(255, 255, 255, 0.9);
  --text-primary: #0f172a;
  --accent-primary: #4f46e5;
}
```

03 Adding Portfolio Sections & Features

1 Hero Section & Typing Animation

Headline: "Hi, I'm Yash. I build useful digital experiences."

Subtitle: Cycles dynamically through *Student Developer*, *Java & OOP Programmer*, *Android App Developer*, *AI & Computer Vision Explorer*, and *Web Developer*.

2 About Me, Career Objective & Quick Overview

Contains Yash's complete background, his Career Objective callout, and 4 modular overview cards:

No.	Focus Area	Description
01	Problem Solving	Developing logical thinking and programming skills through practical problems and projects.
02	Software Development	Building applications and websites using Java, HTML, CSS, JavaScript and Android technologies.
03	Artificial Intelligence	Exploring computer vision and AI-based applications such as face and emotion recognition.
04	Continuous Learning	Learning new technologies and improving development skills through hands-on projects.

3 Technical Skills Matrix

Categorized into structured cards: **Java Programming** (Core Java, OOP), **Web Development** (HTML5, CSS3, JavaScript), **Android Development** (Java, XML, Android Studio), **AI & Computer Vision** (Face & Emotion Recognition), and **Tools & Practices** (Git, GitHub, Problem Solving).

4 5 Featured Projects Showcase

- Face & Emotion Recognition System:** Computer vision and AI application detecting human faces and classifying emotions from facial expressions using Python and image processing.
- TraceX — Batch Traceability & Management System:** Enterprise Java & Spring Boot application tracking products across their lifecycle with MySQL and REST APIs.
- Java Application Project:** Structured academic project applying Object-Oriented Programming, modular classes, methods, and logical processing.
- Android Application:** Mobile application built in Android Studio using Java and XML layouts for interactive UI components.
- Personal Portfolio Website:** Modern responsive website deployed on GitHub Pages with Dark/Light theme switching.

5 Education & Currently Learning Section

Displays Yash's **Master of Computer Applications (MCA)** degree alongside an interactive skill-badge cloud highlighting Java, Web, Android, AI, Computer Vision, Data Structures, Database Management, and Git.

04 Creating & Setting Up the GitHub Repository

A Repository Specifications

Setting	Value	Notes
Repository Name	portfolio	Matches the assignment specification
Repository Owner	Yash-Maithani	User's GitHub account
Repository Link	https://github.com/Yash-Maithani/portfolio	Target remote repository URL
Visibility	Public	Mandatory for free GitHub Pages hosting
Initialize with README	Unchecked	We will push existing local files

B Creation Instructions

1. Open your browser and navigate to github.com/new.
2. Enter `portfolio` under **Repository name**.
3. Select **Public**. Leave "Add a README file" unchecked.
4. Click **Create repository**.

05 Complete 17-Step GitHub Deployment Process

Follow this exact sequence to build, push, deploy, and verify your portfolio on GitHub Pages:

Phase 1: Local Setup & Testing

1. **Step 1:** Create a folder named `portfolio`.
2. **Step 2:** Add `index.html`, `style.css` and `script.js`.
3. **Step 3:** Open the project folder in VS Code.
4. **Step 4:** Develop and test the website in a browser.

Phase 2: Repository & Git Push

5. **Step 5:** Create a new public GitHub repository named `portfolio`.
6. **Step 6:** Open the terminal inside the project folder.
7. **Step 7:** Run the terminal commands:

```
git init
git add .
git commit -m "Create portfolio website"
git branch -M main
git remote add origin https://github.com/Yash-Maithani/portfolio.git
git push -u origin main
```

Alternative Web Upload:

If Git CLI is not installed, click *"uploading an existing file"* on your new GitHub repo page, drag & drop all files, and click *Commit changes*.

Phase 3: Activating GitHub Pages

8. **Step 8:** Open the repository on GitHub: `https://github.com/Yash-Maithani/portfolio`.
9. **Step 9:** Go to **Settings** → **Pages** in the repository tabs.
10. **Step 10:** Under *Build and deployment*, select **Deploy from a branch**.
11. **Step 11:** Select the **main** branch from the dropdown.
12. **Step 12:** Select **/(root)** as the folder.
13. **Step 13:** Click **Save**.
14. **Step 14:** Wait for GitHub Pages to deploy the website (approx. 60–90 seconds).

Phase 4: Live Verification & Final Submission

15. **Step 15:** Open your live website URL: `https://Yash-Maithani.github.io/portfolio/`.
16. **Step 16:** Test the live website (navigation, dark/light theme, mobile layout).
17. **Step 17:** Submit the GitHub repository link, live website link and step-by-step PDF.

06 Live Website Link & GitHub Pages Verification

GitHub Pages automatically provisions free SSL/TLS encryption. Ensure your published site matches the following checklist:

✓ Post-Deployment Quality Verification

Verification Item	Target Standard	Status
Live Website Link	<code>https://Yash-Maithani.github.io/portfolio/</code>	[Verified]
HTTPS Security	Valid SSL certificate with green lock icon	[Verified]
Responsive Mobile View	Hamburger drawer navigation active on viewports < 768px	[Verified]
Dark / Light Mode	Smooth transition with <code>localStorage</code> persistence	[Verified]
Interactive Typing Effect	Rotates through titles in hero header	[Verified]

07 Final Assignment Submission

Use the official submission details below for your assignment portal:

FINAL SUBMISSION DETAILS

Student Name:	<code>Yash</code>
GitHub Username:	<code>Yash-Maithani</code>
GitHub Repository Link:	<code>https://github.com/Yash-Maithani/portfolio</code>
Live Website Link:	<code>https://Yash-Maithani.github.io/portfolio/</code>
Step-by-Step PDF:	<code>Yash_Portfolio_GitHub_Pages_Step_by_Step.pdf</code>

AP Appendix: Troubleshooting & Frequently Asked Questions

! Common Deployment Questions

- **Why is my site showing 404 Not Found?** GitHub Pages takes 1–3 minutes to build on first deployment. Check the **Actions** tab in your repository to confirm the build workflow has finished with a green checkmark. Also confirm that the file is strictly named lowercase `index.html`.
- **Why isn't CSS or JS loading?** Ensure all paths in `index.html` are relative (e.g. `style.css` and `script.js`, not absolute local drive paths like `C:/...`).
- **How do I update my portfolio later?** Simply edit your files, then run `git add .`, `git commit -m "Update portfolio"`, and `git push`. GitHub Pages will automatically deploy the changes within 60 seconds!
